

# Antibiotics for Bronchitis

One of the common disorders of the **lungs** is what is known as **bronchitis**. This condition gets its name from its nature in order to impact the houses that act as the transporter of oxygen to and in the lungs. These types of structures are usually called bronchial tubes, and also when they get inflamed and also irritated, the condition is known as bronchitis. It may occur in two forms; some people may have acute bronchitis, although some may complain in opposition to repeating bronchitis signs and symptoms which may indicate that they have chronic form of the condition; which unfortunately is incurable.

Speaking of the chronic kind first, the major cause because of it is actually long-term smoking. Long-term exposure to air pollution, dust or toxic gases in the environment or workplace may also cause the same. Now speaking of acute bronchitis, it maybe a repercussion of the bacterial infection, viral an infection, or it may also be a consequence of breathing in international concerns to the lungs. More often than not, severe bronchitis follows an episode of cold and flu, which may suggest that a viral infection that causes these types of infections, also **causes bronchitis**. Nonetheless, in some cases, a bacterial infection will get diagnosed as the causal broker. And this is the time, antibiotics are used for the managing the situation.

## Let It Come to a Boil and Wait Until It Begins to Steam
